Zitzi Active G2

Working chair

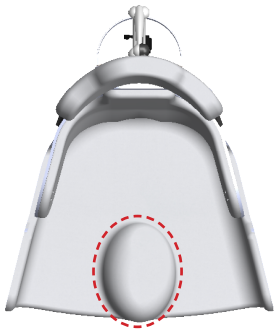

- *An active way to sit!*

Zitzi Active is a seat with a special designed back- and seat part which give the user a unique seated position.

It is developed to all children and youngsters which have a need for a secure upright seating during activity or while doing work for example at school.

The **active sitting position** strengthens the user's balance and postural control.
In this pose, you sit in a 'rider's position' (with the legs apart), which encourages you to raise your body and prevents it from collapsing.

Zitzi Active have a **build-in abductor** which position the pelvic to avoid that it rotate backwards and prevent the user from sliding forward.

The chair can be easily **adjusted from active sitting to resting position**. By initially angling the backrest backwards and further by tilting the base backwards, a good resting position is achieved without the user having to move out of the chair.

The chair's design has an inbuilt dynamic, which is good for users with reduced muscle strength and/or spasticity.

- Zitzi Active G2 gives children and young people a better seat where a traditional task chair is not enough.

Zitzi ACTIVE

Headrest
Different chapes and brackets

Chest strap
Prevents the upper body from falling forward
