Zitzi

FLIPPER PRO FLEX

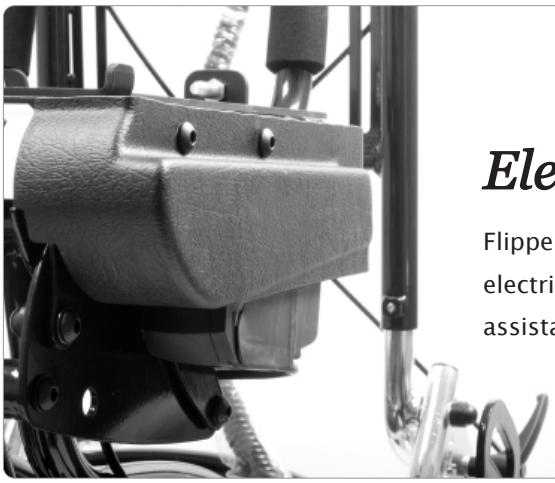

Tilt in space

Unique for Zitzi Flipper Pro Flex is its “tilt in space” feature, allowing the seat to be tilted without compromising the balance and stability between the seat and underframe. This way the center of gravity is only minimally altered as opposed to when using a conventional tilt.

Manual or electric

There are two options to choose between for the lift feature. The electric motor is suitable for lifting larger weight effortlessly while the manual hydraulic lift is a hassle-free solution that doesn’t require access to an electrical outlet for charging.

Electric tilt

Flipper Pro with electrical functions can also be equipped with electrical tilt for an easier handling and less physical strain on assistants and parents.

Wheel types

Flipper Pro Flex is a frame that provides an opportunity for both indoor and outdoor use. Choose between 12’’or 16’’wheels where the 16’’ comes as standard. The frame is also equipped with gas piston tilt. Available in electric or manual edition.
